Teaser	Would you like to store animal carcasses and animal by-products? You can find out more here.
Volltext	Animal by-products are material that is not (or no longer) intended for human consumption. Its fate must be documented and it must be disposed of safely. However, it can still be used commercially if the corresponding documentation obligations and hygiene regulations are complied with. For example, animal fats are used to produce biodiesel, as a basis for industrial products and hygiene products (soap, glue, etc.). Animal by-products are divided into three categories: Category 1 material has the highest risk level. This category includes, for example, animal carcasses from wild animals suffering from epidemics, pets and zoo animals, laboratory animals or specified risk material from ruminants. Category 2 material has a medium risk level. This includes, for example, dead animals from farms (e.g. fallen stock and equidae). Category 3 material has the lowest risk level. For example, slaughterhouse waste from animals that showed no signs of disease or food waste.

Modul	Sachverhalt
	The materials in all three categories must not (re-)enter the food chain. Category 3 material can be used as animal feed if appropriate hygiene requirements are met and cannibalism is avoided. To ensure traceability and safe handling, the material may only be stored, transported, processed and traded by registered or approved businesses. If animal by-products are not (or cannot be) safely used commercially, they must be disposed of safely.
Erforderliche Unterlagen	The required application documents vary depending on the type of intended activity and can be requested from the competent veterinary authority. A technical description of the intended work steps, the transport containers and vehicles as well as a site plan of the premises are usually required for approval or registration.
Voraussetzungen	The requirements cannot be listed in general terms, as the requirements depend on many factors, including the type, origin and planned use of the material.
Kosten	Administrative fees are incurred for registration or approval in accordance with state law.
Verfahrensablauf	
Bearbeitungsdauer	The processing time varies depending on the inspection effort and the type of activity. In many cases, at least one site inspection is carried out by appointment.
Frist	There are no deadlines.
weiterführende Informationen	Information on animal by-products: https://www.bmel.de/DE/themen/tiere/tiergesundheit/tierische-nebenprodukte/tierische-nebenprodukte_node.html
Hinweise	The activity may only commence as soon as the competent authority permits this.
Rechtsbehelf	

Modul

Sachverhalt

Kurztext

- Animal carcasses and animal by-products storage
- The utilization of animal by-products is closely linked to animal disease control. In order to protect humans, animals and the environment, animal carcasses and animal products that are not intended for human consumption must be disposed of safely.
- The processing or disposal can be commissioned by the competent authority to a company that operates collection points, processes material and collects material for a fee. Information on this can be found on the website of the local competent veterinary office.
