## Modul

## Sachverhalt

weakly bound form as part of your risk assessment. Information on whether asbestos is present or expected, depending on the usage or construction history of the property, must be obtained from the building owner or client.

- Based on the results of your preliminary investigation, the necessary occupational safety measures and the work procedure to be used must be determined.
- You then draw up a work plan. In this plan, you set out which work procedures and work equipment will be used to remove and dispose of asbestos and materials containing asbestos.
- Based on the risk assessment and the work plan, you must instruct your employees in relation to the work to be carried out.
- If the above requirements are met, notify the relevant health and safety authority of the work at least seven days before starting the activity.
- In exceptional cases, the deadline can be shortened upon written request.
- The notifications can be company-related or object-related. Property-related notifications must be sent to the health and safety authority responsible for the location of the property.
- If the notification is complete and plausible, you will not receive any feedback from the health and safety authority. After the seven days have elapsed, you can start with the notified work.
- Missing notifications, incorrect, incomplete or untimely notifications constitute administrative offenses that can be punished with a fine.

### Bearbeitungsdauer

In principle, there is no confirmation by the authority.

### Frist

- Activities involving materials containing asbestos must be reported to the authorities at least 7 days before the start of the work.
- In urgent cases, the competent occupational health and safety authority may agree to shorten the deadline.

## weiterführende Informationen

### Hinweise

A copy of the notification must be sent to the responsible statutory accident insurance institution
