Handlungsgrundlage	Luftverkehrsgesetz (LuftVG): • § 12 Flughafenbereich und Umgebung • § 15 Andere Luftfahrthindernisse • § 16a Tag- und Nachtkennzeichnung • § 17 Beschränkter Bauschutzbereich • § 18a Verbot der Errichtung von Bauwerken
Teaser	Do you want to erect a building in the vicinity of an aerodrome or air traffic control facility, erect a mast , build a dam, erect other structures or facilities or operate equipment such as a construction crane, mobile crane, concrete pump or drilling rig ?
Volltext	Do you want to erect a building in the vicinity of an aerodrome or air traffic control facility, erect a mast , build a dam, erect other structures or facilities or operate equipment such as a construction crane, mobile crane, concrete pump or drilling rig ? Then you will need a licence under aviation law. This depends on • the distance to the aerodrome reference point or to the runway of an aerodrome, • the distance to air traffic control facilities • the type and height of the structure or the equipment to be operated. A construction protection zone is always defined for commercial airports. This surrounds the airport with a radius of six kilometres. In the approach sectors, however, it extends up to a distance of 15 kilometres. A special construction protection zone may also be established for other airports. At the very least, however, the construction protection zone encloses an airfield with a radius of 1.5 kilometres. If you are unsure whether the site is located in a construction or

Modul	Sachverhalt
	facility protection area, you can send an informal preliminary enquiry by e-mail to find out whether a permit will be required. The protection zone for aeronautical navigation facilities depends on the type of facility Installation. Such navigation systems are not only found in the vicinity of airports. The Federalthe Federal Supervisory Authority for Air Navigation Services examines whether the statutory construction ban applies if buildings or other facilities or equipment can cause interference with navigation systemsinterfere with navigation systems. You need a licence under aviation law if installations represent an obstacle to air traffic or could lead to interference with air traffic control systems. This may be the case, for example, with buildings, aerials, chimneys, construction cranes, mobile cranes and other construction equipment, even trees or groups of trees. Note: If you require a building permit for the construction of a building, you do not need to apply separately for the aviation permit for the buildingseparately. The building authority involves the aviation authority as part of the building permit procedure Please note: This does not apply to the implementation of the building Building permit procedure and also not for construction equipment used to erect a building.
Erforderliche Unterlagen	as described in the application form, for example: • General site plan • Site plan • Coordinates • Crane type sheet
Voraussetzungen	none
Kosten	depending on the individual case
Verfahrensablauf	You must apply in writing to the competent authority for authorisation under aviation law. Please use the online application form.
