Teaser	Standard land values help you to answer the question of the approximate value of the land in the area you are inquiring about.
Volltext	<p>Standard land values serve to ensure property market transparency. They represent zone-by-zone average location values with value-influencing characteristics that are intended to apply to the majority of properties located in the zone. It is always assumed that the property is undeveloped, regardless of a real development. In the information, the standard land value is given in euros per square meter as well as with its value-determining characteristics. In addition to property market transparency, the standard land values also serve tax purposes.</p> <p>The standard land values are determined on the basis of actual purchase cases. According to the Building Code, notarizing bodies are obliged to send copies of the purchase contracts to the offices of the appraisal committees for land values. The expert committees evaluate the contracts for undeveloped land and derive standard land values from them. If there are no or too few purchase contracts for an area, other variables can also be used for determination, e.g. index series or rents.</p>

Modul

Sachverhalt

The standard land values are determined and decided by the expert committees.

The expert committees are responsible for specific regions in Lower Saxony defined by the state; they are made up of chairmen and honorary members. The presiding members are members of the surveying and cadastral administration. Volunteer members are experts from the broad field of the real estate industry, e.g. from the fields of architecture, civil engineering, agriculture, finance or brokerage.

An expert committee is always autonomous and independent. To support the completion of tasks, each expert committee has an office, which is also located at the surveying and cadastral administration.

Verfahrensablauf

Standard land values are available free of charge on the Internet in Lower Saxony:

Lower Saxony real estate market

There are three ways to navigate to the desired standard land value:

1. Address search
2. Search by parcel number
3. Graphical search by zooming and moving the map section

The selected standard land value is displayed with its value-influencing characteristics.

You can also request an official printout in PDF format via a print button and print it out on your device.

Bearbeitungsdauer

Kurztext	<ul style="list-style-type: none"> • Information on standard land values according to the Building Code • Standard land values are average location values for the soil that are divided into zones and are available across the board. • The standard land values are published with their value-influencing characteristics, which must be consistent for the majority of the plots in the zone. The most important of these features is the type of use. • Once a year, the locally responsible expert committee for land values determines standard land values as of 01.01. These will be published on the Internet about 6 to 8 weeks later. • Standard land values are given in euros per square metre. • The standard land values can be viewed free of charge by all users on the Internet. • Competent authority: respective office of the expert committees at the State Office for Geoinformation and Surveying of Lower Saxony (LGLN) for their area of responsibility
